**J-RAK™**

The Radial J-Rak is a 2RU rackshelf that allows as many as 8 Radial direct boxes to be rackmounted. These can face 'forward' or 'backward' depending on the system designer's preference.

Stemming from the adage: 'necessity is the mother of invention', the Radial J-Rak provides sound companies with a simple yet extremely functional solution for their DI inventory management. The problem is simple: during peak season, most sound companies must resort to cross-renting just to fill rider requests. Inevitably, they go to a warehouse looking for a stand-alone DI and find that all that is left on the shelf are a few old 4-channel rack units. Or conversely, they have a show going on the road that needs 12 rack-mounted DIs but the investment seems impractical for one tour. All you do is take the book-end cover off the JDI or J48 and attach one of the 8 insert sleeves that come with the J-Rak. These are then screwed into the J-Rak shelf from the top.

Since the J-Rak employs a series of sleeves, the direct boxes can have their XLR's facing the front or the rear of the rack depending on whether one is racking up DIs for keyboards, sound modules, computers or other instruments and sound sources.

Features

- 2RU rackmounting shelf for Radial DI's and splitters
- Easy access to eight DIs or splitters
- Ultra-tough 14 gauge steel to last a lifetime
- DI's can be front or rear-mounted

Applications

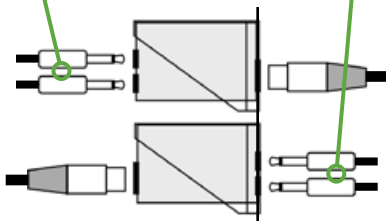

- Permanent rackmount installations in venues
- Keyboard racks and electronic drum racks
- Mix and match passive and active DIs

Cool stuff

- Inventory management control tool
- Improves studio setup organization
- Easy to assemble or take apart

FOR KEYBOARD RACKS
connection to modules is normally done on the rear.

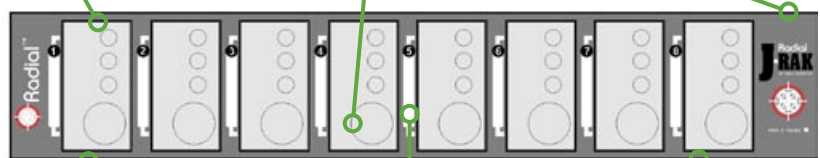

GUITARS AND BASS
are often connected from the front side.

MIX AND MATCH Radial products to create a custom interface rack.

FRONT OR REAR XLR
Mount DIs with input or outputs facing front.

DESIGNED TO FIT any standard 19" EIA rack enclosure. Only 2 RU!

WELDED 14 GAUGE STEEL
construction for 'drop out of the truck' strength.

WAX PENCIL ID STRIPS for easy marking of DI channels. Makes trouble shooting easy!

TOUGH BAKED ENAMEL
finish keeps the J-Rak looking great for years!

J-CLAMP™

Order No. R800 1017

The Radial J-Clamp is a simple steel housing bracket that allows any of the Radial J-Class direct boxes, isolation units, mic splitters and reamping products to be permanently mounted in locations such as in podiums, under board room tables and inside amplifier and effect racks.

Made from 14 gauge steel with a built in flange mount, the J-Clamp simply replaced the outer bookend shell. User-writable tabs are screened on the top are designed for pencil or marker labels.

Installing it is easy. Simply unscrew the book-end outer shell from the a Radial J-Class product and slide the J-Clamp shell in place. The pre-drilled flange mount allows quick installation on any flat surface.

FLANGE MOUNT for mounting the J-Clamp, stupid!
