Ultra Phonix *Special Overdrive*

MKII

The Ultraphonix MKII is an overdrive that produces the tone and feel of a Dumble™ Overdrive Special (ODS) amplifier through any clean amp, while being 30% smaller than the original Ultraphonix. Voiced alongside four Dumble™ ODS amplifiers from 1970-1990, the Ultraphonix MKII delivers on the Dumble™ sound, in spite of amp variations from year to year. On top of it's decreased size, the Ultraphonix MKII has an added RATIO control, allowing you to blend clean and distorted signals to your taste. The Ultraphonix MKII produces the legendary note boom and harmonic overtones associated with the Dumble™ ODS in a compact package.
